

“Join us to implement technologies shaping the automotive future.”

Savari, a venture-funded company focused on 5G and V2X communications, is seeking talented and highly motivated Software Engineers. Our employees and associates around the world are passionate about building software and hardware sensor solutions for automotive OEM car manufacturers, the automotive aftermarket, smart cities, and pedestrians with the vision of making transportation predictive, safer and more efficient.

Role : System Requirement Engineer / Technical Solution Engineer

Experience : 8 to 14 Years

Location : Bangalore, India

Roles & Responsibilities:

You will be responsible for breaking down specific project and marketing requirements into detailed engineering requirements. You should have a strong ability to negotiate and build consensus among multiple stakeholders and groups including pre-sales, marketing, and engineering. You will be the owner and go-to person for all the specific customer technical requirements. Specifically, you may be required to

- Review and understand customer requirements and articulate them explicitly back to R&D and internal teams.
- Work with marketing/product management, sales and customer technical experts as needed to collect detailed customer/project technical requirements
- Work with technical leads and architects to breakdown the technical requirements into detailed engineering (both development engineering and validation engineering) requirements for consumption by various internal groups
- Ensure product compliance with relevant industry standards and specifications.
- Assess the need for additional documentation and collateral and ensure that the content is adequate and accurate.
- From time-to-time represent Savari in Industry technical committees, workshops, and other events
- Work with internal teams to formulate internal engineering roadmaps.
- Responsible for providing feature support and new feature development as per customer deployment needs.
- Analyze technologies, framework and make appropriate suggestions (demos, POCs) to influence product direction.
- Assist the Sales Group in answering requests for information, proposals, solution descriptions, and feature requirements.

Should have the following expertise:

- You need to be self-organized and a self-starter

- Excellent customer facing skills with a strong drive to solve customer problems.
- Experience with formulating engineering requirements based on marketing requirements is a must
- Balance of business and technology acumen, including the ability to articulate high-level technical solutions to business problems.
- Prior experience in Embedded C & Linux knowledge is a huge plus
- Prior experience in an automotive/networking/telecom domain is a must
- Hands-on experience in networking/telecom/wireless protocol development is a plus
- Good verbal and written communication.
- Ability to work in a fast-paced environment.
- Candidates with V2X background will be a huge plus.

What do we offer?

Savari offers a great work environment, challenging career opportunities, professional training, and competitive compensation. You will be a part of the Technical Centre, which houses the Design Studio and the Engineering Centre, is in Bangalore. we are an Equal Opportunity /Affirmative Action employer
